Address: BOR Society, Block B, Johar Town, Lahore
Date of Birth: 11-08-1993
CNIC Number: 31303-9039700-1

Summary

Experienced and certified OutSystems developer with a demonstrated history of developing innovative programs that expedite the efficiency and effectiveness of organizational success. Well-versed in technology and writing code to create systems that are reliable and user-friendly. A multi-dimensional resource who does not restrict himself to some specific technology or platform. Developed and delivered the products by developing them from scratch, worked on already running projects and refactored the code to implement best practices to make the product efficient and reliable.

Along with development skills, I have good approach towards problem solving by understanding business process, gathering, and analyzing requirements, finding and implementing the reliable solutions. I've good grip on JIRA to implement the agile SDLC.

PROJECTS
OutSystems

- ➢ **Waste & Recycling One (Traditional)**
  WR1 is the solution for waste and recycling industry. It is an enterprise system which covers all the business flow of the waste and recycling industry and provides reliable solutions.

- ➢ **Device Manager (Reactive)**
  It is a service type application which configures the devices for communication with WR1. This application stores the configuration data of the devices and send it to Device Manager service for publishing and subscribing the devices.

- ➢ **Multiweigh (Reactive)**
  This application is for waste disposal sites. It covers all the process of disposal sites from vehicle entrance to create works orders and generating the receipt.

- ➢ **Device Manager Unit Tests**
  It is a POC application perform automated unit testing in Outsystems using BDD framework. Application performs automated unit tests for REST API and data validations.

- ➢ **Mass Upload**
  This application is for uploading bulk data to the DB from Excel file. Application uploads the file, validate all the data, and update the DB tables. Validation works based on mandatory/non-mandatory, data types and relationships.

- ➢ **CRM (Worked as Tech Lead)**
  This is a reactive web application integrated with WR1, covers all the major CRM operations. It manages Opportunity, Target Groups, Campaigns, and Inquiry for potential customers.

- ➢ **Bid Management (Worked as Tech Lead)**
  This application manages Bidding process. It consists of creating Bids, inviting customers, sending mails and reminders, selection of the Bid winner and awarding Bids.

- ➢ **Customer Portal (Worked as Tech Lead)**
  This application is designed for the customers to manage their Service Agreements and Work Orders. Application allows customers to get interacted with company and place their queries about the services they're getting.

- ➢ **HR-On (Mobile)**
  This application is developed for the employee's management. This includes the employee profiles, leaves management and other perks offered to them.

- ➢ **Medicus (Mobile)**
  This application is developed to generate smart medical reports and predictions according to the reports. Application is integrated with AI system through rest api's and provide the visual representation of the medical condition and assessment to the user.

- ➢ **Health Dashboard (Mobile)**
  This application is developed to track the life style of the user. User can see his medical history and keep track of his physical and mental health. Application is integrated with OutSystems Health plugin and other rest api's.

- ➢ **CMS Backoffice (Reactive)**
  This application is the backoffice of the main application. The application keeps all major configurations required in the main application. This application reduces the need to get log in to the service center as well.
